

IT Service & Preventative Maintenance

IT Doesn't have to be Complicated

Regular Preventive Computer Maintenance

Are you running a business that needs reliable computers and don't have an in-house I.T. department? We are sure that you recognize that your computers are actually tools you use in your business and that you need to have up to date properly tuned tools to do your job effectively. We can and will assist with that.

Why Maintenance?

- **Performance:** Do you know if your computer is performing as best as it can? Gradually performance degrades over time, and we have seen many different computers regularly and can tell the difference. Even if you have virus protection doing scheduled updates and scans, and you have a firewall, you can still get hacked or have someone spying on you or fall victim to identity theft.
- **Minimize Downtime:** Doing regular updates, Checking event logs, etc. are just 2 things you can do, there are many more checks to be done.
- **IT Security:** Growing concern of hackers. Virus protection isn't enough.
- **Stability:** Checked the health of your hard drive lately? Do you recognize signs of potential problems?

Special points of interest

- The most effective way to speed up your machine is to increase the RAM
- Also to Install a Solid State Drive.
- To increase your staff's Productivity & efficiency is to add a 2nd Monitor, make their work easier.
